Project Title: The Solar System (and beyond)

I currently plan to build this website as multiple pages, rather than one long page. This is potential for change, depending on the results of my lofi prototypes for each style. Regardless, I plan to have site navigation at the top of the page and focus on creating an informative, easy-to-read experience. The wikipedia page is very extensive and provides plenty of information for each page/highlighted topic.

Highlighted topics:

- **Home Page/Introduction** - Introduce the topic of the solar system, include basic information on its contents and background.
- **History/Formation** - Discuss how it formed, evolved, and expectations for future changes.
- **General Characteristics** - Discuss its composition, orbits, habitability, and comparison with other systems.
- **Sun** - Focus on the sun's characteristics.
- **Inner Planets** - Overview of our inner planets and their characteristics. *I think I want each planet to have its own page, with a large image of that planet, surrounded by facts, however, this may change after lofi prototyping.
 - **Mercury**
 - **Venus**
 - **Earth**
 - **Mars**
 - **Asteroid belt** (Ceres, Vesta, Pallas)
- **Outer Planets** - Overview of our outer planets and their characteristics. *I think I want each planet to have its own page, with a large image of that planet, surrounded by facts, however, this may change after lofi prototyping.
 - **Jupiter**
 - **Saturn**
 - **Uranus**
 - **Neptune** (Trans-Neptunian region)
- **Boundary regions/Celestial neighborhood** - Discuss the current uncertainties and contextualize the system within the larger universe.
- **Sources** - I will credit any references, including the Wikipedia page and photos, on this page.
